Representative Carol Miller  
1605 Longworth, House Office Building  
Washington, DC 2051

July 15, 2019

Dear Congresswoman Miller:

We, the undersigned organizations, thank you for introducing the Small Airports Mothers’ Rooms Act of 2019. By leading Congress to protect and support breastfeeding, you demonstrate a commitment to our nation’s families. Breastfeeding is a proven primary prevention strategy, building a foundation for life-long health and wellness. Breastfeeding parents who choose or need to travel should not have to struggle to find lactation spaces – no matter the size of the airport, risking their milk supply and thereby their ultimate breastfeeding success.

Building on the success of the Friendly Airports for Mothers (FAM) Act, already being implemented in airports across the nation well ahead of the required 2021 implementation date, the Small Airport Mothers’ Room Act of 2019 (H.R. 3362) would extend these provisions to small airports. Small airports would have two additional years to come into compliance, and would be able to use Airport Improvement Program funds for the purpose of complying with the new requirement.

Small hub airports would be required to provide a private, non-bathroom space in each terminal for breastfeeding people to express breast milk. The space must be accessible to persons with disabilities, available in each terminal building after the security checkpoint, and include a place to sit, a table or other flat surface, and an electrical outlet.

Human milk is the preferred and most appropriate "First Food," adapting over time to meet the changing needs of the growing child. The United States Breastfeeding Committee joins the U.S. Department of Health and Human Services and all major medical authorities in recommending that infants get no food or drink other than human milk for their first six months and continue to receive human milk for at least the first 1-2 years of life.

The evidence for the value of breastfeeding to children’s and mother’s health is scientific, solid, and continually being reaffirmed by new research. Compared with formula-fed children, those who are breastfed have a reduced risk of ear, skin, stomach, and respiratory infections; diarrhea; sudden infant death syndrome; and necrotizing enterocolitis. In the longer term, breastfed children have a reduced risk of obesity, type 1 and 2 diabetes, asthma, and childhood leukemia. Women who breastfed their children have a reduced long-term risk of diabetes, cardiovascular disease, and breast and ovarian cancers.

Breastfeeding also provides a range of benefits for employers and society. A 2016 study of both maternal & pediatric health outcomes and associated costs based on 2012 breastfeeding rates showed that, if 90% of
infants were breastfed according to medical recommendations, 3,340 deaths, $3 billion in medical costs, and $14.2 billion in costs of premature death would be prevented, annually!

For all of these reasons, The Surgeon General's Call to Action to Support Breastfeeding; the Institute of Medicine report, Accelerating Progress in Obesity Prevention; and the National Prevention Strategy each call for promotion of breastfeeding-friendly environments. Yet in spite of this tremendous recognition—and laws in 50 states that specifically allow women to breastfeed in any public or private location—lactating people continue to face barriers, even harassment, when breastfeeding in public. And when away from their babies, airports are just one of many public places where they face challenges finding a clean, private space to pump.

We know that 80% of mothers intend to breastfeed, and 82.5% actually do breastfeed at birth. Yet only 25% of U.S. infants are still exclusively breastfed at six months of age. Most families today choose to breastfeed, but a range of obstacles can make it difficult to fit breastfeeding into parents' lives.

No matter what they're doing or where they are, breastfeeding people need to express milk every few hours in order to keep up their supply. Missing even one needed pumping session can have several undesirable consequences, including discomfort, leaking, inflammation and infection, decreased supply, and ultimately, breastfeeding cessation. As a result, returning to work often presents a significant barrier to breastfeeding.

Current federal law requires employers to provide nursing mothers who are nonexempt employees a private, non-bathroom location to express breast milk. Airport lactation spaces are therefore an important step to support employers that need to accommodate lactating travelers as well as lactating employees of the airport.

A growing number of airports have designated lactation spaces, yet many lactating people still end up in restrooms or on airport floors. Travelers rarely have control over how long they are in transit, making accessible accommodations within airports a critical priority. We are heartened to see the implementation of the FAM Act in large and medium hub airports and look forward to expanding similar requirements to small airports. This expansion supports, promotes, and protects breastfeeding in rural areas, further contributing to national public health goals.

The Small Airports Mothers’ Rooms Act would help keep our nation's families healthy by ensuring that breastfeeding travelers and airport employees (in airports of all sizes) have access to appropriate facilities. This is an important step toward ensuring all families have the opportunity to reach their personal breastfeeding goals.

Again, we applaud your leadership in introducing the Small Airports Mothers’ Rooms Act and stand ready to help you achieve its passage.

Sincerely,
